05Dec2012

Far-field measurment at 30ID

Energy = 9 keV

Mono = Diamond monochromator

CCD = coolsnap HQ2

1392 X 1040, 6.45 μm pixel,

objective = 10X Zeiss objective lens

CCD placed ~ 7m from the monochromator

With 10X the total field of view 0.89X 0.67 mm

Jung Ho is tweaking the energy and right now it is 9.1315 keV

Beam size

Horizontal X Vertical = 2 X 1.1 mm

Pico motor focussing = Right -206.95

Left -206.85

We took first image, saved as

J:\shashi_data\30ID_5Dec2012\

File name = 5Dec12_firstimage1 , Exp: 18m

For the above image we approximately had 3 beryl windows. Mary is taking out one of them.

We have take out the beryllium window ~~or~~ which was upstream from the scintillor, about 5" ~~each~~

We are trying to fine focus the scintillo

current position of pico = -206.55

we moved the scintillator in 0.1 steps there is much change

we moved the scintillator in 0.05 steps ~~but~~ and found the focussing at -206.6000

(1) The center position image ~~width~~ ~~exposure~~

Exp : 18 msec

File :- 5Dec12_center ~~4-6~~, files 4-6.

Exp = 18 msec

(2) Vertical motion → Camera image - left

5Dec12 - left, files 7-9

Exp : 18 msec

(3)
